PROFESSIONAL SUMMARY

Aspiring Data Analyst with hands-on experience in data analysis projects using Microsoft Excel, SQL, Microsoft Power BI, and Python. Skilled in data cleaning, data visualization, and deriving actionable insights from complex datasets. Experienced in building interactive dashboards, writing efficient queries, and performing exploratory data analysis to support business decision-making. Seeking an opportunity to leverage analytical skills, problem-solving abilities, and technical expertise to contribute to organizational growth while continuously enhancing my knowledge in the field of data analytics.

EDUCATION

ITVEDANT, Delhi – Master in Data Science (In Progress)	2025–2026
CCS UNIVERSITY – B.Com Final Year	2023–2026

SKILLS

- Power BI (Data Modeling & Visualization)
- Excel(Data Cleaning, Analysis & Visualization)
- SQL(Data Extraction and Analysis)
- Python (NumPy, Pandas, Matplotlib)

PROJECTS

Supply Chain Analytics Dashboard using Power BI

- Built an interactive supply chain dashboard using Microsoft Power BI to monitor sales, shipments, inventory, and delivery performance in a unified view.
- Analyzed key business metrics such as revenue, profit margin, stock levels, and on-time delivery rates to evaluate overall performance.
- Identified trends, inefficiencies, and areas for improvement to support better decision-making and operational efficiency.

Car Sales Data Analysis using SQL

- Analyzed car market data using MySQL by writing efficient SQL queries, data aggregation, and filtering techniques.
- Extracted meaningful insights on car availability, pricing trends, fuel preferences, and ownership distribution.
- Identified patterns and trends in the Dataset to support data-driven decision-making and business understanding.

Mumbai House Price Analysis using Python

- Built a house price analysis and prediction model using Python and Machine Learning techniques to analyze Mumbai housing market trends.
- Performed data cleaning, preprocessing, and exploratory data analysis on real estate data to identify key factors affecting property prices.
- Developed predictive models to estimate house prices based on location, area, number of bedrooms, and other property features.
- Used Pandas, NumPy, Matplotlib, and Scikit-learn for data analysis, visualization, and model building.
